

ENERGY MANAGEMENT, REDUCTION, CONTROL, PROCUREMENT & ANALYSIS.

Freidman FM is your one stop shop for managing all of your energy management needs with the strengths, skills and knowledge to make a difference to your business.

Our Approach

Freidman FM work to understand your how your business operates and how energy is used in practice to support the day to day operation of your core business and the products or services that you create for your customers, before developing innovative solutions that support your business rather than simply providing solutions for solutions sake.

Our Team

Our team is formed of highly skilled engineers who understand not only how energy can be optimised, but also understand the commerical realities of operating business, whilst also working to de-mystify technology and jargon that may present a barrier to implementation. This ensures that the solutions presented, generate a tangible saving to your organisation that adds value rather than repeating the green wash that so many of our competitors use.
